MHEL EDISON HATCHAZO

Mobile Developer

About Me

Experienced Mobile Developer specializing in Flutter and Kotlin, with a strong focus on Jetpack Compose, cross-platform development, and modern app architecture. Proficient in building scalable, declarative UI applications and integrating technologies such as Firebase, REST APIs, and offline mapping and routing. Committed to delivering meaningful, user-centric solutions—ranging from real-time chat apps to academic and navigation tools—that address real-world needs with clean design and performance in mind.

Mobile Development Projects

- Lakbay UPLB - A navigation and academic scheduling tool designed for UPLB students, utilizing offline maps, routing, and scheduling functionalities. Built using Jetpack Compose, with advanced integrations like MapLibre and OSMDroid for seamless navigation and route optimization.

- Libro Link – A book discovery and management app built using Kotlin (Jetpack Compose) and Flutter. It integrates the Google Books API for real-time book search and provides features like theme switching, favorites, and in-app previews via WebView. The Kotlin version uses MVVM architecture, Room Database, Retrofit, and Coil to ensure performance and a smooth user experience, while the Flutter version mirrors the same core features using Dart, Provider, and HTTP client.

- Konekto – A real-time chat application developed in both Kotlin (Jetpack Compose) and Flutter, powered by Firebase Firestore. It supports one-on-one messaging, dynamic user search, and chat history management. Both versions handle Firestore data efficiently, ensuring low-latency communication and responsive UI. The app emphasizes clean architecture and real-time sync across platforms.
